ERRATA 563

Index to Volume 148

Adaptive architecture of herbaceous plants, 535
Age dependent tradeoff curves, optimal life histories with, 33
AHLBORN, B., HARPER, D. G., BLAKE, R. W., AHLBORN, D. and CAM, M., Fish without footprints, 521
AHLBORN, D. (see AHLBORN, B.), 521
Albumin structure and function in Alzheimer's disease, proposed mechanism for alteration of (letter), 283
Alzheimer's disease, proposed mechanism for alteration of albumin structure and function in (letter), 283
Animal and microclimate, thermal interaction between; specification of a "standard environmental temperature" for animals outdoors, 331
Arterial blood pressure, optimal, 289
ASHIDA, H., MARU, E. and TATSUNO, J., Time discrete model of recurrent inhibition in hippocampal dentate gyrus, 1

BACON, P. J., BALL, F. and BLACKWELL, P., Analysis of a model of group territoriality based on the resource dispersion hypothesis, 433
BACON, P. J., BALL, F. and BLACKWELL, P., A model for territory and group formation in a heterogeneous habitat, 445
BALL, F. (see BACON, P. J.), 433, 445
BEGON, M. (see BOWERS, R. G.), 305
BEN-HAIM, S. (see FRUCHTER, G.), 175
Biochemistry, a physical basis for, 393
Birds and mammals, population cycles in; does periodicity scale with body size?, 469
BLACKWELL, P. (see BACON, P. J.), 433, 445
BLAKE, R. W. (see AHLBORN, B.), 521
Blood pressure, arterial, optimal, 289
Body size and periodicity; population cycles in mammals and birds, 469
BOWERS, R. G. and BEGON, M., A host-host-pathogen model with free-living infective stages, applicable to microbial pest control, 305
BUKHAROV, I. B. (see KHANIN, M. A.), 289

Calcium ions, a dynamical model for phase transitions of lipids induced by, 295
CAM, M. (see AHLBORN, B), 521
Cells, biological, ellipsoidal, in rotating electrical fields, theory of the frequency response of, 495
Cells, mammalian, cultured, mechanisms responsible for the limited lifespan and immortal phenotypes in, 383
Channel capacity of molecular machines, 83
Channel kinetics, ion; model using deterministic chaotic rather than stochastic processes, 243
CHEN, Y. (see WARD, D. J.), 193
CLARK, J. W., JR. (see HALTER, J. A.), 345
COLLADO-VIDES, J., A syntactic representation of units of genetic information—a syntax of units of genetic information, 401
Computer-aided design of peptide drugs, development and testing of protocols for, using oxytocin, 193
Crick's adaptor: why is it an RNA and not a protein? (letter), 287
CSANYI, V. (see KAMPIS, G.), 17

Cycles, population, in mammals and birds: does periodicity scale with body size?, 469
Cytoplasmic incompatibility, the evolution of; when spite can be successful, 269

Dentate gyrus, hippocampal, time discrete model of recurrent inhibition in, 1
Deterministic chaotic processes in model of ion channel kinetics, 243
Discrete gap junction coupling: effects on propagation in myocardium, 49
DNA methylation: relations with gene transcription and mutation; a quantum biological approach, 145
DOWSE, H. B. and RINGO, J. M., Comparison between "periodograms" and spectral analysis: apples are apples after all (letter), 139
Drugs, peptide, development and testing of protocols for computer-aided design of, using oxytocin, 193
Dynamical model for phase transitions of lipids induced by calcium ions, 295
Dynamical systems, one-dimensional, applied to an isolated beating heart, stability analysis of, 175

ELDER, D., Why is Crick's adaptor an RNA and not a protein? (letter), 287
Electrical fields, rotating, theory of the frequency response of ellipsoidal biological cells in, 495
Ellipsoidal biological cells in rotating electrical fields, theory of the frequency response of, 495
Energy dissipation from molecular machines, 125
Enzyme steady-state reactions, a probabilistic view on, 229
Evolution of cytoplasmic incompatibility or when spite can be successful, 269

Fish without footprints, 521
Footprints, fish without, 521
Frequency response of ellipsoidal biological cells in rotating electrical fields, 495
FRUCHTER, G. and BEN-HAIM, S., Stability analysis of one-dimensional dynamical systems applied to an isolated beating heart, 175

Gag core proteins of HTLV retroviruses; homologies with myelin basic protein (letter), 279
Gap junction coupling: effects on propagation in myocardium, 49
Gene transcription and mutation, a quantum biological approach to the relations of DNA methylation with, 145
Genetic information, a syntax of units of, 401
GLICK, J. L., Proposed mechanism for alteration of albumin structure and function in Alzheimer's disease (letter), 283
GOUNARIS, E. (see ROSENBERGER, R. F.), 383
Group formation and territory in a heterogeneous habitat, 445
Group territoriality: a model based on the resource dispersion hypothesis, 433

HALTER, J. A. and CLARK, J. W., JR., A distributed-parameter model of the myelinated nerve fiber, 345
HARPER, D. G. (see AHLBORN, B.), 521
HASSARD, B. (see SHIAU, L. J.), 157
Heart, beating, isolated, stability analysis of one-dimensional dynamical systems applied to, 175
Hippocampal dentate gyrus, time discrete model of recurrent inhibition in, 1
Hodgkin-Huxley model, degenerate Hopf bifurcation and isolated solutions of, with varying sodium ion concentration, 157
Hopf bifurcation, degenerate, and isolated periodic solutions of the Hodgkin-Huxley model with varying sodium ion concentration, 157
Host-host-pathogen model with free-living infective stages, applicable to microbial pest control, 305

HTLV retroviruses, myelin basic protein displays homologies with gag core proteins of (letter), 279
HUANG, J. F. (see LIU, C. Q.), 145
HURST, L. D., The evolution of cytoplasmic incompatibility or when spite can be successful, 269

Immortal phenotypes in cultured mammalian cells, mechanisms responsible for, 383
Information, genetic, a syntax of units of, 401
Information and self-reproduction: beyond the machine metaphor, 17
Ions, calcium, a dynamical model for phase transitions of lipids induced by, 295
Ion channel kinetics: a model using deterministic chaotic rather than stochastic processes, 243

KAMPIS, G. and CSANYI, V., Lefe, self-reproduction and information: beyond the machine metaphor, 17
KEENER, J. P., The effects of discrete gap junction coupling on propagation in myocardium, 49
KHANIN, M. A. and BUKHAROV, I. B., Optimal arterial blood pressure, 289
Kinetics, ion channel; a model using deterministic chaotic rather than stochastic processes, 243
KOLETTAS, E. (see ROSENBERGER, R. F.), 383
KRUKONIS, G. and SCHAFFER, W. M., Population cycles in mammals and birds: does periodicity scale with body size?, 469

LARA-MORENO, E. (see LARA-OCHOA, F.), 295
LARA-OCHOA, F. and LARA-MORENO, E., A dynamical model for phase transitions of lipids induced by calcium ions, 295
LIEBOVITCH, L. S. and TOTH, T. I., A model of ion channel kinetics using deterministic chaotic rather than stochastic processes, 243
Life histories, optimal, with age dependent tradeoff curves, 33
Lifespan, limited, and immortal phenotypes in cultured mammalian cells, mechanisms responsible for, 383
Lipid phase transitions induced by calcium ions; a dynamical model, 295
LIQUORI, A. M., Myelin basic protein (MBP) displays significant homologies with gag core proteins of HTLV retroviruses (letter), 279
LIU, C. Q., WANG, Y., HUANG, J. F. and ZHANG, H., A quantum biological approach to the relations of DNA methylation with gene transcription and mutation, 145
Lotka–Volterra equations, 3-D, the global analysis of; dynamic boundedness and indirect interactions in the case of one predator and two prey, 545

MCARTHUR, A. J., Thermal interaction between animal and microclimate: specification of a "standard environmental temperature" for animals outdoors, 331
MCCORKLE, R. A., A physical basis for biochemistry, 393
Mammalian cells, cultured, mechanisms responsible for the limited lifespan and immortal phenotypes in, 383
Mammals and birds, population cycles in; does periodicity scale with body size?, 469
MARU, E. (see ASHIDA, H.), 1
MAZUR, A. K., A probabilistic view on steady-state enzyme reactions, 229
Methylation, DNA: relations with gene transcription and mutation; a quantum biological approach, 145
Microbial pest control, a host–host–pathogen model with free-living infective stages, applicable to, 305
Microclimate and animal, thermal interaction between; specification of a "standard environmental temperature" for animals outdoors, 331
Molecular machines, channel capacity of, 83
Molecular machines, energy dissipation from, 125

Mutation, a quantum biological approach to the relations of DNA methylation with gene transcription and, 145
Myelin basic protein displays significant homologies with gag core proteins of HTLV retroviruses (letter), 279
Myelinated nerve fiber, a distributed-parameter model of, 345
Myocardium, the effects of discrete gap junction coupling on propagation in, 49

Nerve fiber, myelinated, a distributed-parameter model of, 345

OTWINOWSKI, M. (see PAUL, R.), 495
Oxytocin in development and testing of protocols for computer-aided design of peptide drugs, 193

PAUL, R. and OTWINOWSKI, M., The theory of the frequency response of ellipsoidal biological cells in rotating electrical fields, 495
Peptide drugs, development and testing of protocols for computer-aided design of, using oxytocin, 193
"Periodograms" and spectral analysis, comparison between (letter), 139
Phase transitions of lipids induced by calcium ions; a dynamical model, 295
Phenotypes, immortal, in cultured mammalian cells, mechanisms responsible for, 383
Physical basis for biochemistry, 393
Plants, herbaceous, a model analysis for the adaptive architecture of, 535
PLATT, E. (see WARD, D. J.), 193
Population cycles in mammals and birds: does periodicity scale with body size?, 469
Predator, one, and two prey, dynamic boundedness and indirect interactions in the case of; the global analysis of 3-D Lotka–Volterra equations, 545
Probabilistic view on steady-state enzyme reactions, 229
Propagation in myocardium, effects of discrete gap junction coupling on, 49
Proteins: myelin basic protein displays homologies with gag core proteins of HTLV retroviruses (letter), 279
Protein, why is Crick's adaptor an RNA and not a? (letter), 287

Quantum biological approach to the relations of DNA methylation with gene transcription and mutation, 145

Resource dispersion hypothesis, a model of group territoriality based on, 433
Retroviruses, HTLV, myelin basic protein displays homologies with gag core proteins of (letter), 279
RINGO, J. M. (see DOWSE, H. B.), 139
RNA, why is Crick's adaptor an? (letter), 287
ROBSON, B. (see WARD, D. J.), 193
ROSENBERGER, R. F., GOUNARIS, E. and KOLETTAS, E., Mechanisms responsible for the limited lifespan and immortal phenotypes in cultured mammalian cells, 383

SAKAI, S., A model analysis for the adaptive architecture of herbaceous plants, 535
SCHAFFER, W. M. (see KRUKONIS, G.), 469
SCHNEIDER, T. D., Theory of molecular machines. I. Channel capacity of molecular machines, 83
SCHNEIDER, T. D., Theory of molecular machines. II. Energy dissipation from molecular machines, 125
Self-reproduction and information: beyond the machine metaphor, 17
SHIAU, L. J. and HASSARD, B., Degenerate Hopf bifurcation and isolated periodic solutions of the Hodgkin–Huxley model with varying sodium ion concentration, 157

Sodium ion concentration, varying, degenerate Hopf bifurcation and isolated periodic solutions of the Hodgkin-Huxley model with, 157
Spectral analysis and "periodograms", comparison between (letter), 139
Stability analysis of one-dimensional dynamical systems applied to an isolated beating heart, 175
Structure of albumin, proposed mechanism for alteration of, in Alzheimer's disease (letter), 283
Syntax of units of genetic information, 401

TATSUNO, J. (see ASHIDA, H.), 1
TAYLOR, P., Optimal histories with age dependent tradeoff curves, 33
Territoriality, group: a model based on the resource dispersion hypothesis, 433
Territory and group formation in a heterogeneous habitat, 445
Thermal interaction between animal and microclimate: specification of a "standard environmental temperature" for animals outdoors, 331
Time discrete model of recurrent inhibition in hippocampal dentate gyrus, 1
TOTH, T. I. (see LIEBOVITCH, L. S.), 243
Transcription, gene, a quantum biological approach to the relations of DNA methylation with, 145
